3. Test results

3.1 Disc

Mechanical stability

After the testing of the braking system according to Directive 71/320/EEC as amended by 98/12/EC, the thickness deviation and planarity of the brake discs have been examined.

The thickness deviation over the entire circumference was less than 5%.

The deviation of the planarity was less than 0.3 mm.

Heat resistance

After the fade test a crack testing, rotation angle testing and a testing regarding planarity of the brake disk have been carried out.

The tests showed positive results.

3.2 Brake testing with regard to Council Directive 71/320/EEC a.l.a.b. 98/12/EC

3.2.1 Test type 0

3.2.2 Test type I (Fade test, laden) with engine disconnected

Repeated stops

Test requirements – Category of vehicle M1

„n“ repeated braking from an original speed v_1 and a mean fully developed deceleration d_m towards speed v_2 in which the period of time between the beginning of a braking and the beginning of the following braking is „ Δt “.

$$n = 15$$

$$v_1 = 80 \% v_{max} \leq 120 \text{ km/h}$$

$$v_2 = \frac{1}{2} v_1 = 60 \text{ km/h}$$

$$\Delta t = 45 \text{ sec.}$$
